

## The National Social Health Insurance Information Systems (SEHATI-IT)

# Contents

**I** Project Overview

**II** Project Progress

**III** System Overview

**IV** Project Goals

## National Social Health Insurance Program (SEHATI)

The National Health Plan (2016-2025), which was endorsed by Cabinet, came to pave the way forward for the health industry in the Kingdom of Bahrain for the coming 10 years. The Plan provides the building blocks for the provision of high quality health services, healthcare sustainability, and securing the necessary manpower and infrastructure, to achieve the set goals of the Economic Vision 2030.

One of the main objectives of the National Health Plan (2016-2025), is the adoption of the Social Health Insurance Program (SEHATI), to develop the quality of the current health system and ensure sustainability. This system is meant to revolutionize the local health sector through better utilizing the available resources, while overcoming pressing challenges, which are mainly due to the rapid increase in population and shifting demographics. This Phenomenon is increasing the burden and demand on health services.

## National Social Health Insurance Information Systems (SEHATI-IT)

**Health Information and Knowledge Management Agency (HIKMA)** will be established under the new system. HIKMA, under the Supreme Council of Health, will aim to monitor and direct the healthcare industry. Health information will be readily available to all health-related institutes and will be based on the following new systems:

### a. National Electronic Medical Record (NEMR):

Currently, public and private health facilities work with independent health information systems. In an attempt to unify these systems, a National Health Data Dictionary (NHDD) has been designed as a basis for NEMR. NEMR will gather all information in a single data warehouse, that is accessible by healthcare workers in all institutes. This also provides a basis for monitoring the outcomes of treatment as per the directives of the quality control committee. It will also act as a tool to limit the overuse of services, such as repeating unnecessary diagnostic tests or the over prescription of medication

## National Social Health Insurance Information Systems (SEHATI-IT)

### b. National Health Insurance Information System (NHIIS)

This system will oversee the claims raised from service providers( hospital and clinic)s to service byers (SHIFA OR INSURANCE COMPAINES) it involves filling up sample forms that specify the type of service diagnosis requested tests, procedures if any, and length of stay the system provides an audit for the compatibility of the provided information as per the insurance regulation and would flag any discrepancies thus providing a resourceful tool to control health expenditure.

### c. Drug Utilization Review (DUR)

This system will review all drugs and pharmaceuticals that enter the kingdom from port of entry to distribution amongst pharmacies and dispensing to patients as per approved prescription. the system will provide a tool to ensure the safe use of pharmaceuticals in appropriate doses and drug-drug interactions, as well flagging allergies if present. it will also allow for the dispensing of drugs from any participating pharmacy, with claims raised to service buyers are per the agreed contracts.

## National Social Health Insurance Information Systems (SEHATI-IT)

### d. Smart Utilization Review (SUN)

The system will generate periodic reports from the information system for use by decision-makers and policy setters based on evidence and studies

HIKMA will be self-financed by these services provided to the main stakeholders (health institutes, insurance companies, pharmacies, SHIFA).

### e. Personal Health Record (PHR)

It's a portal designed for all citizen and resident holding a valid eKey to view their electronic health information stored in National Electronic Medical Repository (NEMR) such as patient profile, appointments, hospital Visits summary, prescribed medication, Body Mass Index (BMI), Diagnostic examinations status such as Laboratory, Imaging and Functional tests.

# I. Project Overview (SEHATI-IT Project)

Reform Bahrain's national health care system and build an advanced IT system for efficient operation of health insurance

- ▶ **Project Name**    **Bahrain National Health Insurance System Reform Joint Project ( Bahrain SEHATI-IT Project )**
- ▶ **Project Period**    ✓ **System Implementation 26 Months (06/2017 ~ 07/2019)**  
                                  ✓ **Maintenance and Enhancement Contract (08/2019)**
- ▶ **Project Scope**    ✓ DUR ( Drug Utilization Review) System Implementation for the safety and distribution management of medicines  
                                  ✓ NHIS (National Health Insurance Information System) Implementation for health insurance claims  
                                  ✓ SUN (Smart Utilization of NEMR) System Implementation for analysis and utilization of national health medical data  
                                  ✓ NEMR (National Electronic Medical Repository) Implementation for national medical information storage  
                                  ✓ PHR (Personal Health Record) Implementation for personal health information repository

## II. Project Progress (SEHATI-IT Project)

### Roadmap of Bahrain National Social Health Insurance Information Systems in line with the Kingdom of Bahrain Health Insurance Law

#### Project Establishment

- Reforming the Bahrain health care environment through the establishment of a National Social Health Insurance Health Information Systems

#### Project Management

- The design and construction of the SEHATI-IT system in Bahrain in collaboration with HIRA

#### Business Process Design

- Design work processes for the implementation of the health insurance system in Bahrain

#### Health Data Standardization

- Standardization of Health Data by applying national drug codes, health standard codes and developing forms for collecting information

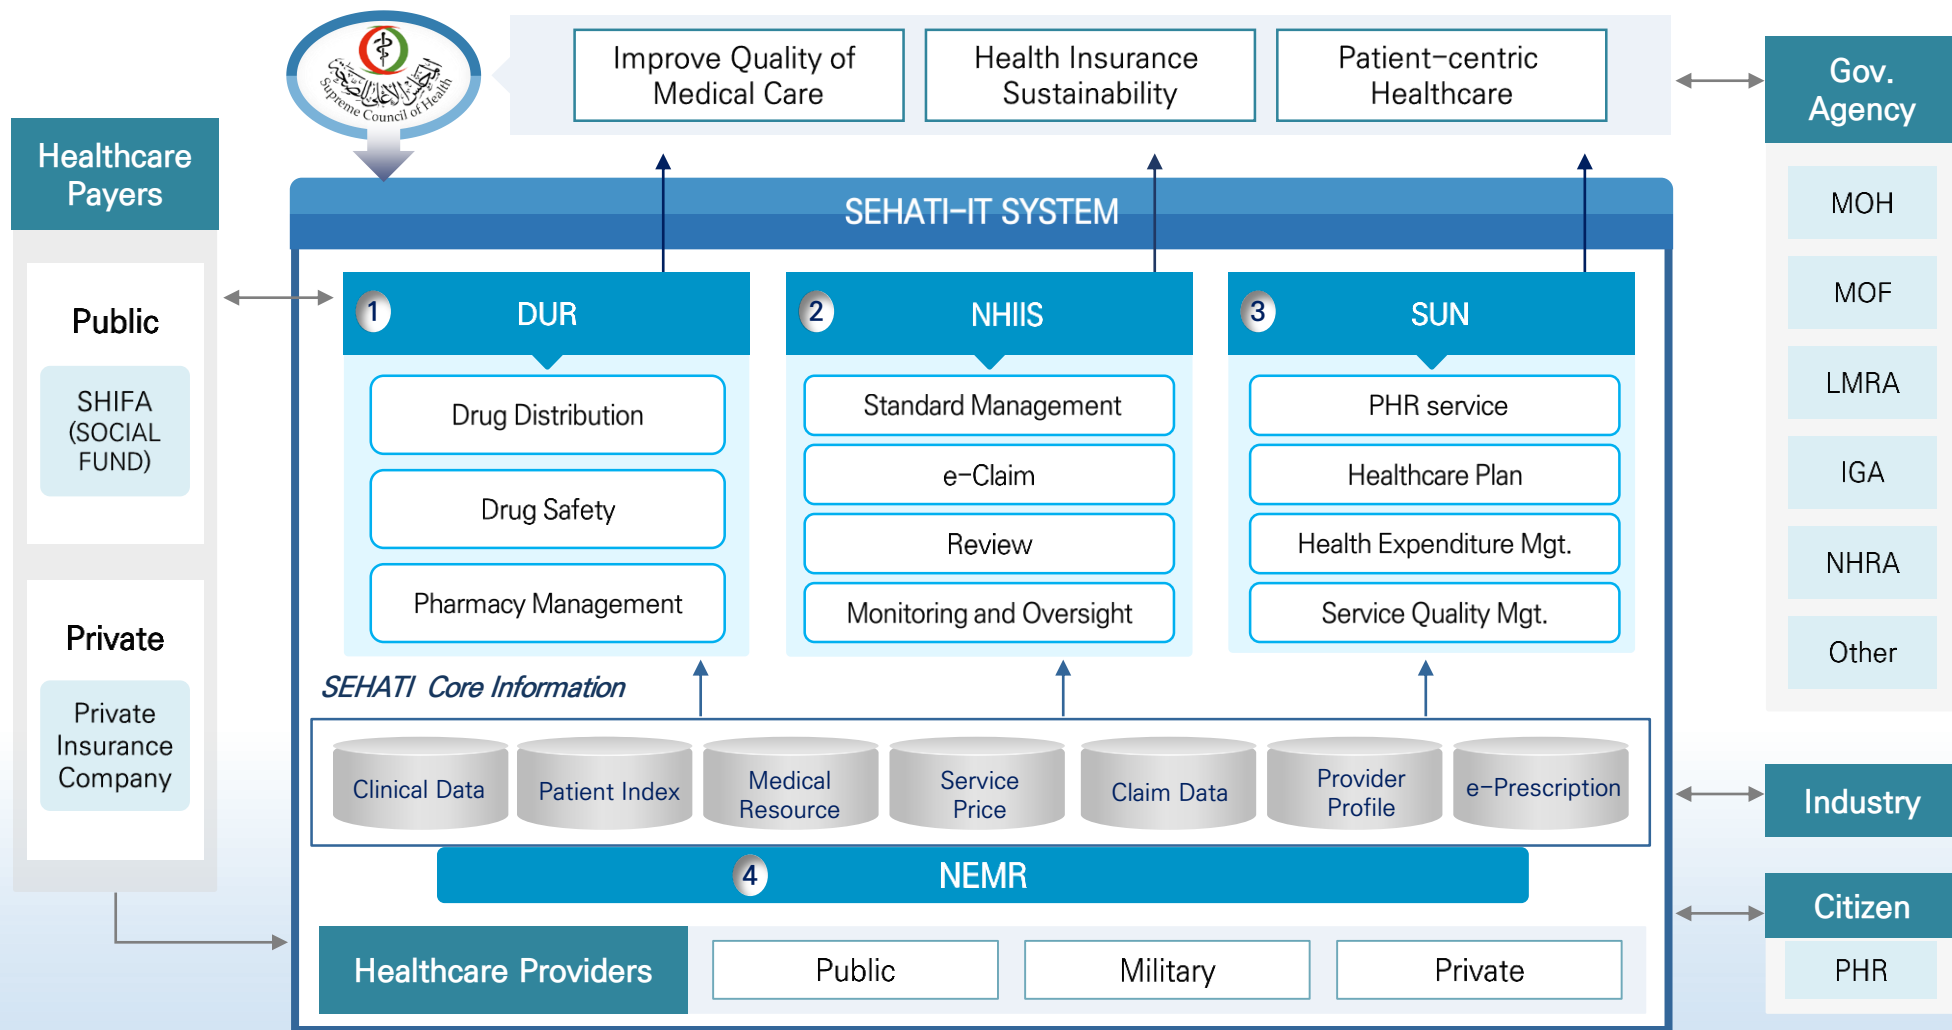

#### Infrastructure Configuration

- Configure a cloud-based Amazon Web Service (AWS) environment for cost savings, security, and productivity

# III. System Overview(SEHATI-IT System)

## Design of the National Social Health Insurance Information Systems

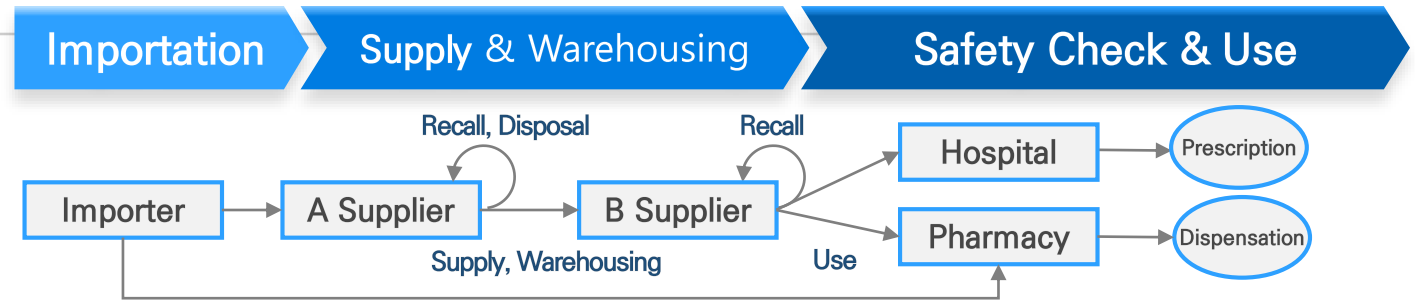

# III. DUR System (Drug Utilization Review)

## Establishing an environment for safe use of drugs and integrated distribution system

### DUR Major Function

- 1 **Drug Distribution Management**
  - Manage drug invoice & distribution report
  - Manage integrated distribution system from import to use
  - Manage standard of controlled drug
- 2 **Recall Drug & Inventory Management**
  - Automatic inventory processing for each distribution system
  - Proper inventory setting and monitoring
  - National Inventory Monitoring
  - Recall Drug Management
- 3 **Drug Safety check & Prescription/Dispensation**
  - Provide interface for prescription and dispensation
  - Provide interface for patient allergy information
  - Provide real-time safety check and prescription/dispensation

### Drug Distribution Management

Drug Distribution Declaration Standardization

Agent Information + Drug Information + Distribution Information

Confirm the consistency between declarations

Supply Report ↔ Warehousing Report ↔ Usage Report (Prescription/Dispensation)

### Information Analysis

- Warehousing Quantity
- Controlled Drug Distribution
- Prescription, Dispensation Comparison

### Proper Inventory Management

Approve inventory application

Estimate appropriate inventory

Drug Inventory Calculation

A Drug Inventory Shortage

Drug Shortage Alarm

### Drug Safety Check

Customized Service considering facility environment

Computerized environment **Web Service**

Non-Computerized environment **Portal Register**

### Various status and statistics functions

Status by Drug Safety Check Type

Drug Inventory Status

Prescription/Medication/Pharmacy Information

# III. NHIIS System (National Health Insurance Information System)

Standardization of baseline data provides a basis for notifying e-Claim's prompt and accurate review and processing results

## NHIIS Major Functions

### 1 Standard Management

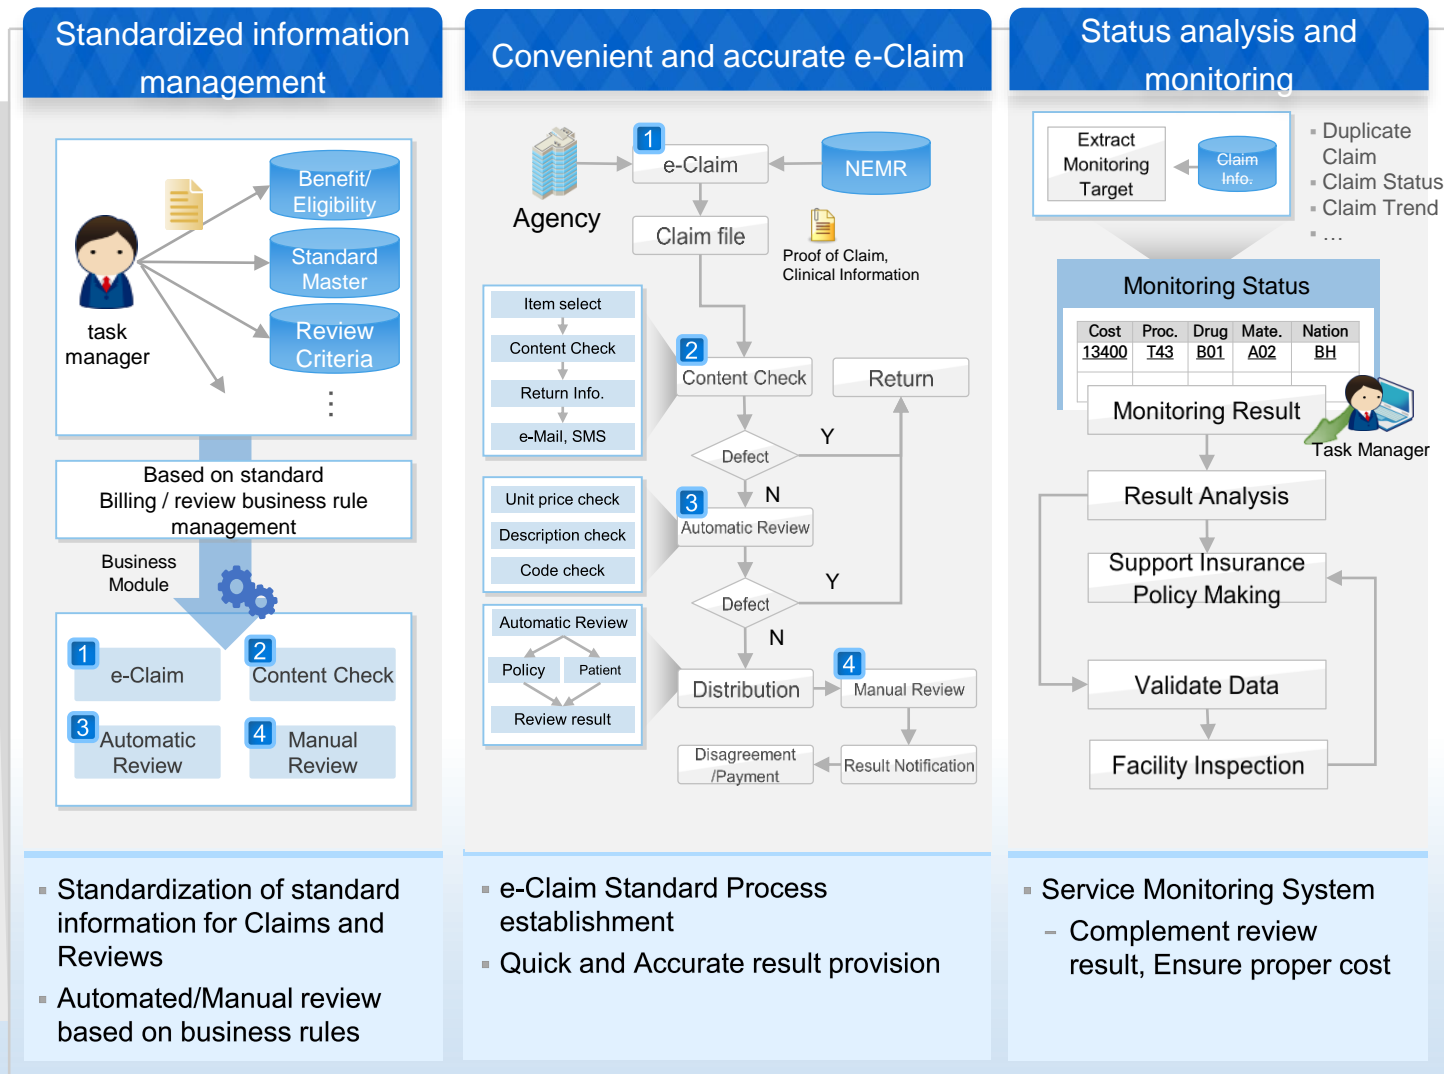

- Benefit Package management
- Patient Eligibility Management
- Master Information Management (Diseases, Procedures, DRG)
- Review Criteria Management

### 2 e-Claim and Review

- Manage receipts and send receipts for returns
- Automatic Review Process
- Assignment of reviewers and management of processing status by auditors

### 3 Statistics and Monitoring

- Analyze billing information and provide statistics, such as medical trends for specific items
- Provides cost monitoring function for diseases and procedures

- Standardization of standard information for Claims and Reviews
- Automated/Manual review based on business rules

- e-Claim Standard Process establishment
- Quick and Accurate result provision

- Service Monitoring System
  - Complement review result, Ensure proper cost

# III. SUN System (Smart Utilization of NEMR)

## Sustainable medical policy establishment Support through integrated analysis of national data

### Basis of National healthcare data analysis

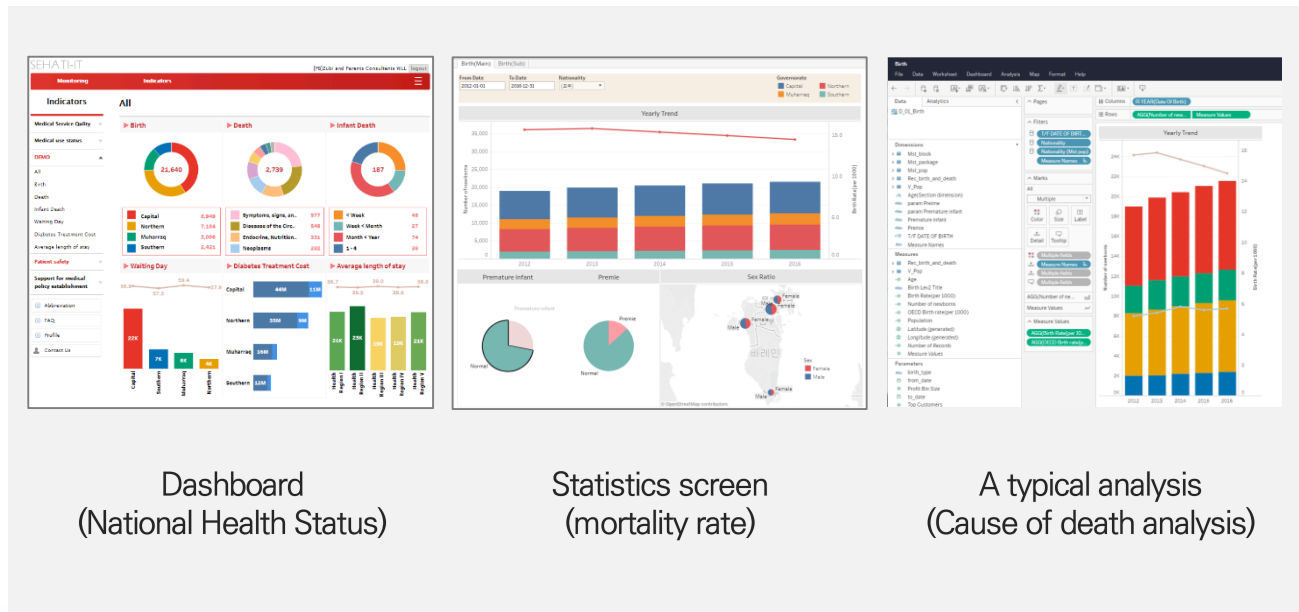

#### SUN Major Functions

##### 1 Medical policy establishment support through data analysis

- Foundation of medical data integration
- Statistical information provision
- Minimize redundancy of requested reports

##### 2 Information provision for the public and organizations

- Providing contents and delivery channel according to user type
- Providing public health information services, such as personal health records (PHR)

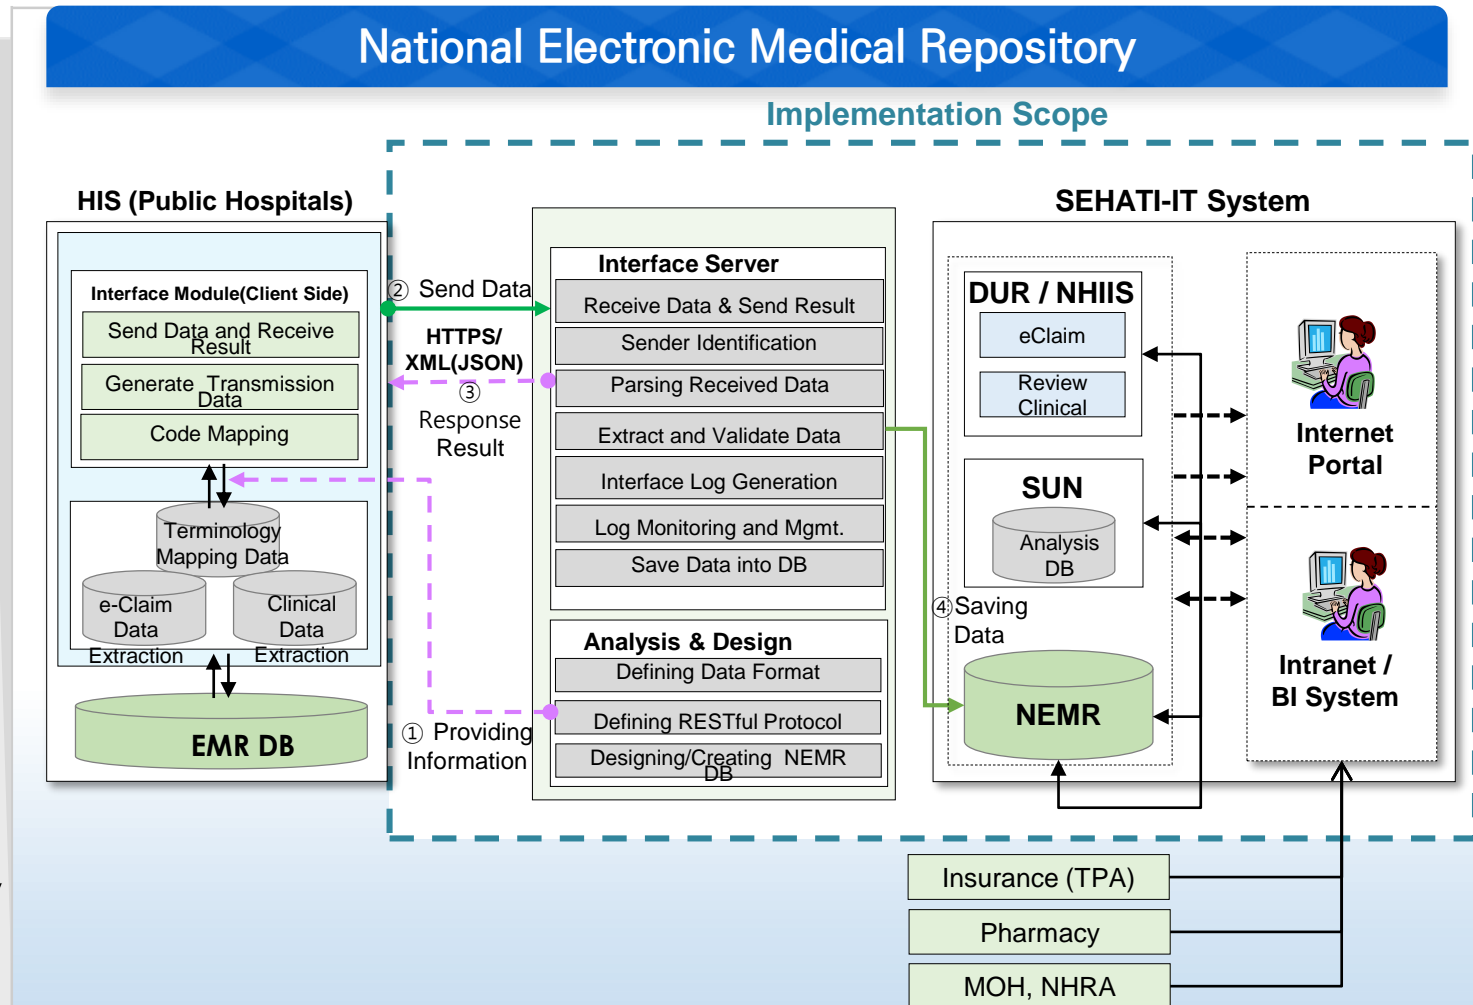

- Information connectivity by integrating national medical data
- Providing contents(report/data etc.) considering various users such as decision makers and citizens

# III. NEMR System (National Electronic Medical Repository)

Integrity and utilization all of Bahrain's national medical information based on the National Health Data Dictionary standard (NHDD)

## Major function

- 1 **NEMR DB design for claim and clinical information**
  - DB of claim information for billing and Insurance information
  - DB of clinical information such as patient information, diagnosis, medication, medical service and medical record information
  - DB of information for SUN indicator
- 2 **Function for data interface**
  - Sending and receiving data using web service
  - Integrity, verification and validation of data and storing data into NEMR DB
  - Log data management and detail log inquiry
- 3 **Data management and inquiry**
  - Change history management and inquiry of interface data
  - Interface status statistics
  - Clinical information viewer

# III. PHR Service (Personal Health Record)

Providing PHR services to look up personal health information such as disease information, prescription/dispensation and medical information

## Major function

### 1 Providing personal health care information

- Allergy information and disease information such as chronic and infectious, congenital disease
- Vaccinations information
- BMI Information management

### 2 Drug prescription /dispensation and medical information

- Drug prescription and dispensation information
- Visit and appointment information for Health facility
- Test scheduling and result information (Imaging, Lab etc.)
- Sick leave certification and issued history

## Personal health care through PHR services

Providing personal health care information such as disease information, vaccinations, BMI

Providing medical information for drug prescription and dispensation, visit, scheduled test and test result information

## IV. Project Goals

High-quality Health Service

Efficient Operation of the National Health System

Health Insurance Innovation in Bahrain
